

BEFORE YOU START USING FAUSTLIVE

STEP 1 : Configure File Associations

Why would I do that ?

To ensure that your system is well configured for .dsp, .lib and .svg files and doesn't do crazy things.

1 – Go to the folder "FilesToConfigure"

2 – For each file :

- Right Click on the file
- Choose "Properties"
- In "Open With", choose the default application with which the file will be opened
(a **text editor** for .dsp and .lib ;
a **browser** for .svg)
- Click "Define as Default Application"

STEP 2 : Install Jack

1 – If you don't already have it, install Jack – **sudo apt-get install jackd2**

STEP 3 : Use FaustLive

1 – Go to the folder "FaustLive"

2 – Start using it =)
