

# BEFORE YOU START USING FAUSTLIVE

## STEP 1 : Configure File Associations

### Why would I do that ?

To ensure that your system is well configured for .dsp, .lib and .svg files and doesn't do crazy things.

**1** – Go to the folder "FilesToConfigure"

**2** – For each file :

- Right Click on the file
- Choose "Properties"
- In "Open With", choose the default application with which the file will be opened  
(a **text editor** for .dsp and .lib ;  
a **browser** for .svg)
- Click "Define as Default Application"

## STEP 2 : Installations

**1** – If you don't already have it, install Jack – **jackd2**

**2**- Make sure that QT is installed (At least version 4.8)

## STEP 3 : Use FaustLive

**1** – Go to the folder "FaustLive"

**2** – Start using it =)
