BEFORE YOU START USING FAUSTLIVE

STEP 1 : Configure File Associations

Why would I do that ?

To ensure that your system is well configured for .dsp, .lib and .svg files and doesn't do crazy things.

1 – Go to the folder "FilesToConfigure"

2 – For each file :
→ Right Click on the file
→ Choose "Read Information"
→ In "Open With", choose the default application with which the file will be opened
(a **text editor** for .dsp and .lib ;
a **browser** for .svg)
→ Click "Change All"

STEP 2 : Install JACK (or update it)

Why would I do that ?

You won't be able to use FaustLive without Jack installed.

1 – Go to the folder "JackInstaller"

2 – Double Click on Jack Installation package in Jack

3 – If you install it for the first time, reboot.

STEP 3 : Use FaustLive

1 – Go to the folder "FaustLive"

2 – Copy FaustLive.app in your Applications

3 – Start using it =)

KNOWN BUGS

1- Foreign functions cannot be used
2- You may have problems with Coreaudio if you are on OSX 10.6.8
